INDUCTION-TYPE MOTION SENSOR!

Induction-type motion sensor! Come over to the tub, this sensor helps to know your motion, recognize you are coming for a bath, then wakes up the tub, the control panel light is on. It's ready for your instruction.

HIDDEN FAUCET AND HAND SHOWER

The design concept of the bathtub is "SIMPLIFIED". There is nothing you can see on the tub, even the tap and hand shower are hidden. With LED decoration light, it's sharp and modern.

AUTOMATIC FAUCET SYSTEM

When they are needed, instruct the control panel, the hand shower and tap will rise automatically. When they are not needed, again, by the control panel, they will go hidden again.

DESIGN RELY ON DETAILS

Waterfall volume keeps changing from maximum to minimum then maximum. 1.5HP pump is connected with the waterfall and all the jets. Press the control panel at where you want the waterfall volume stop. Have fun with different shapes of the waterfall! When the volume is at its maximum, then you have the jets in weakest power. Vice versa, when the jets are at strong power, the waterfall volume is minimum.
